

# Engineering Reboot 2026

## Governance Update – Daily Field Manual Structure Clarification

Decision Date: June 23, 2026

### Background

During Week 4 execution, certain daily field manuals introduced the sequence 'Exercise 1', 'Exercise 2', and 'Project'. While educationally valid, the term 'Project' created ambiguity with the repository's formal Projects directory and artifact-classification rules.

### Decision

Effective immediately, routine daily field manuals shall return to the Phase-based structure successfully used throughout Weeks 1–3:

- Phase 1
- Phase 2
- Phase 3

The term 'Project' shall be reserved exclusively for weekly integration activities, capstone deliverables, portfolio-oriented applications, and artifacts intended for placement in the repository Projects folder.

### Repository Mapping

Routine daily exercises:  
Week-XX\Exercises\Day-XX\

Weekly integration projects and portfolio artifacts:  
Week-XX\Projects\

### Rationale

1. Eliminates ambiguity between exercises and projects.
2. Restores the proven Phase-based execution model from Weeks 1–3.
3. Maintains consistency between field manuals and repository structure.
4. Simplifies artifact placement decisions.
5. Preserves the meaning of true integration projects.

### Implementation

Beginning with Day 18 and subsequent non-capstone days, field manuals shall use Phase 1 / Phase 2 / Phase 3 headings. Routine exercises shall not be labeled as Projects. This decision remains in effect until superseded by a future governance revision.
