

Engineering Reboot 2026

Week 1 – Day 2 Field Manual (v2.1)

7:00 PM – 7:05 PM

Workspace Verification

Open C:\Projects\Engineering-Reboot-2026 and verify that the Day 1 folders exist. Confirm VS Code and PowerShell launch correctly.

7:05 PM – 7:15 PM

Initialize Source Control

1. Open PowerShell.
2. Navigate to: `cd C:\Projects\Engineering-Reboot-2026`
3. Verify location with: `pwd`
4. Initialize Git: `git init`
5. Configure identity if needed:
`git config --global user.name "Glenn Ogapong"`
`git config --global user.email "glennj.ogapong@gmail.com"`
6. Verify configuration: `git config --global --list`
7. Save screenshots to 01-Week-01\Evidence\Day-02

7:15 PM – 7:25 PM

Create Root README

Create README.md at the root of C:\Projects\Engineering-Reboot-2026.
Include project objective, start date, platform, and daily study window.

7:25 PM – 7:35 PM

First Commit

Run the following commands:

```
git add .  
git status  
git commit -m "Initialize Engineering Reboot workspace"  
git log --oneline
```

Store screenshots in the Evidence folder.

7:35 PM – 7:45 PM

Git Fundamentals Notes

Create 01-Week-01\Notes\Day-02-Git-Notes.md and document:

- Repository
- Commit
- Branch
- Merge
- Remote
- GitHub

7:45 PM – 7:55 PM

GitHub Preparation

Create a GitHub account if necessary and create a repository named engineering-reboot-2026.

Understand the relationship between a local repository and a remote repository.

7:55 PM – 8:00 PM

Day Journal

Create 01-Week-01\Journal\Day-02-Journal.md.

Record lessons learned, questions, confidence level (1–10), and preparation for Day 3.

Corrected Day 2 Success Criteria

- ✓ Git initialized at C:\Projects\Engineering-Reboot-2026
- ✓ No nested repository created
- ✓ Root README.md created
- ✓ First commit completed
- ✓ Git Notes completed
- ✓ Journal completed
- ✓ Screenshots stored in Evidence folder
