

Engineering Reboot 2026

Week-02 Master Workbook v5.0 (Locked Edition)

Publication Edition

SECTION 1 – Workbook Philosophy

Purpose: eliminate ambiguity and allow the participant to execute the weekly plan without consulting other planning artifacts.

Engineering principles: minimize context switching, administrative overhead, ambiguity, rework, and technical debt; maximize execution, deliberate practice, documentation, evidence collection, and source control discipline.

Daily operating model: Theory → Exercise → Validation → Evidence → Notes → Journal → Git Commit → Git Push.

Definition of success: all deliverables completed, validations passed, evidence collected, notes completed, journals completed, commits completed, pushes completed.

SECTION 2 – How To Use This Workbook

Complete each day in sequence: Theory Review, Exercises, Validation, Evidence Collection, Notes, Journal, Git Commit, Git Push.

Standard daily structure:

Day-XX/Exercises, Projects, Screenshots, Notes/Notes.md, Journal/Journal.md.

Notes answer 'What did I learn?'. Journals answer 'What happened today?'.

SECTION 3 – Embedded Governance Summary

Naming standards:

Notes.md

Journal.md

Git evidence:

Git-Status.png

Git-Commit.png

Git-Push.png

Commit message standard:

Day XX - Completed exercises and documentation

Daily workflow:

git status

git add .

git commit -m "Day XX - Completed exercises and documentation"

git push

SECTION 4 – Week-02 Overview

Week Theme: Python Control Flow.

Topics:

- Conditional Logic

- Boolean Logic

- Loops

- Nested Loops

- Program Flow

- Menu Driven Applications

Deliverables:

Day-06: decision_program.py

Day-07: eligibility_checker.py, building_access_control.py

Day-08: counting_program.py, even_number_generator.py, sum_calculator.py

Day-09: square_pattern.py, right_triangle_pattern.py, inverted_triangle_pattern.py, multiplication_table.py

Day-10: menu_driven_calculator.py

SECTION 5 – Week-02 Wall Planner

Day-06: Conditional Logic

Day-07: Boolean Logic

Day-08: Loops

Day-09: Nested Loops

Day-10: Consolidation Project

SECTION 6 – Week Readiness Review

TD-2026-001 Remote Repository Establishment: COMPLETED.

Completion Notes:

- GitHub repository created
- Remote origin configured
- git push verified
- git pull verified
- Remote workflow operational

Pre-Execution Checklist:

- ☐ VS Code operational
- ☐ Git operational
- ☐ Repository synchronized
- ☐ Week-02 folder structure verified
- ☐ Workbook available
- ☐ Study hour reserved
