

Engineering Reboot 2026

Governance v3.2

Status

Status: APPROVED

Effective Date: June 9, 2026

Supersedes: Governance v3.1

FM-01 — Execution Sequence Principle

Field manuals shall be written in execution order.

1. Mission Brief
2. Learning Objectives
3. Deliverables
4. Artifact Placement
5. Exercise Phase(s)
6. Notes Phase
7. Journal Phase
8. Git Operations Phase
9. Verification Phase
10. End-of-Day Success Criteria

Field manuals shall prioritize execution workflow over reference-document organization.

FM-02 — Integrated Evidence Capture

Evidence requirements shall be placed immediately after the exercise or activity that generates the evidence.

Workflow:

Implement → Validate → Capture Evidence → Checkpoint → Proceed

Field manuals shall avoid placing all evidence requirements in a separate section at the end of the document.

FM-03 — Phase Completion Checkpoints

Every exercise phase shall contain a completion checkpoint.

Example:

- ☐ Exercise completed
- ☐ Validation completed
- ☐ Evidence captured

EV-01 — Evidence Capture Timing

Evidence shall be captured immediately after validation of the associated exercise.

Evidence generation shall not require reconstruction or re-execution of previously completed work.

EV-02 — Git Evidence Consolidation

Git workflow evidence shall be captured in a single screenshot.

Filename:

Git-Operations.png

The screenshot shall display:

- git add .
- git commit
- git push
- git fetch
- git status
- git branch -vv

Purpose:

- Successful commit
- Successful push
- Remote synchronization
- Repository health

EV-03 — Repository Cleanliness Verification

When practical, all exercise artifacts, notes, journals, and evidence shall be created before the final Git commit.

Preferred end state:

Your branch is up to date with 'origin/main'
nothing to commit, working tree clean

Any deviation from this state shall be explained in the journal.

Locked Retrospective Findings

Finding #001

Learning objectives included AND, OR, and NOT, but practical implementation focused primarily on AND.

Finding #002

Evidence requirements appeared too late in the workflow, causing backtracking and re-execution.

Finding #003

Git evidence generation and repository cleanliness verification contained a workflow inconsistency resolved through EV-02.
