

Engineering Reboot 2026

Governance v3.5

Publication Manuscript Edition

Document Status

Document Type: Governance Update

Classification: Program Governance

Version: 3.5

Release Type: Incremental Release

Status: Proposed for Approval

Purpose

This governance update formalizes the Publication Manuscript workflow beginning with Day 20. The objective is to eliminate manuscript reconstruction, improve publication quality, and establish a single authoritative source for all field manuals.

1. Publication Manuscript Rule

Every daily field manual shall first be authored as a single Publication Manuscript (DOCX). The manuscript is the authoritative publication source. PDFs and other publication artifacts shall be generated directly from the approved manuscript.

2. Progressive Manuscript Rule

The Publication Manuscript shall be created at the beginning of the authoring session. Each subsequent authoring pass shall append content to the same document. Reconstruction from prior chat responses is prohibited.

3. Authoring Workflow

Publication PDF

4. Editorial Review Rule

Editorial review occurs only after the complete manuscript has been authored. Editorial changes may improve readability, formatting, consistency, examples, engineering commentary, and typography. Editorial review shall not alter the curriculum defined by the Master Workbook.

5. Locked Publication Source Rule

Once approved, the Publication Manuscript becomes the sole authoritative source for all future renderings. Any revisions shall be made to the manuscript before regenerating PDFs or other archival formats.

6. Publication Rule

The publication PDF shall always be rendered directly from the approved Publication Manuscript. Summarization, regeneration, or reconstruction during publication is prohibited.

Benefits

- Eliminates manuscript reconstruction
- Preserves authoring continuity
- Produces identical DOCX and PDF content
- Improves publication quality
- Supports richer formatting
- Aligns with professional technical publishing practices
