

ENGINEERING REBOOT GOVERNANCE v3.3

Status: LOCKED

Purpose:

Provide governance for the Engineering Reboot 2026 program including directory structure, naming conventions, evidence requirements, Git workflow discipline, workbook control, and documentation standards.

CHANGE SUMMARY FROM v3.2

- Added reference to Field Manual Publication Standard v1.0.
- No changes to directory structure.
- No changes to naming conventions.
- No changes to evidence standards.
- No changes to Git workflow requirements.
- No changes to workbook structure.

DOCUMENTATION STANDARDS – FIELD MANUALS

All Engineering Reboot Field Manuals shall comply with the current approved version of the Engineering Reboot Field Manual Publication Standard.

The Publication Standard governs:

- Field Manual structure
- Readability requirements
- Publication formatting
- Validation presentation
- Evidence checkpoint presentation
- Context-switching reduction requirements
- End-of-day checklist requirements
- Next-day preview requirements

The Publication Standard exists as a separate controlled document and shall be maintained independently from this Governance Document.

In the event of a conflict between the Governance Document and the Field Manual Publication Standard, the Governance Document shall take precedence.
