

Engineering Reboot 2026

Governance

Version 3.4

Week4 Efficiency Edition

Document Status

Document Type: Governance

Classification: Program Governance

Version: 3.4

Release Type: Incremental Release

Status: Approved and Locked

Supersedes: Engineering-Reboot-Governance-v3.3

Authority: Week 4 Process Design Review

Purpose

This release incorporates approved process improvements identified during the Week 4 Process Design Review. The objective of this release is to improve execution efficiency, reduce document verbosity, eliminate duplication between governance and daily field manuals, and preserve implementation and validation rigor throughout the Engineering Reboot 2026 program.

Revision Summary

- Introduced Locked Artifact Rule.
- Introduced Evidence Artifact Naming Standard.
- Established Governance Ownership Rule.
- Established Daily Manual Scope Rule.
- Established New Technology Exception Rule.
- Formalized migration of stable operational standards from daily field manuals into governance and reference documents.
- Established Week 4 baseline for governance and field manual separation of responsibilities.

Governance Update – Week 4 Efficiency Review Integration

1. Locked Artifact Rule

Approved artifacts are considered locked. Once an artifact has been reviewed and approved, it shall not be regenerated, reconstructed, or re-reviewed unless:

- A specific defect is identified.
- The scope of the artifact changes.
- A formal revision is requested.

2. Evidence Artifact Naming Standard

For every Python source file:

.py

-Code.png

-Output.png

Examples:

personal_records.py

personal_records-Code.png

personal_records-Output.png

student_manager.py

student_manager-Code.png

student_manager-Output.png

3. Governance Ownership Rule

The following standards are governance-controlled and shall not be repeated in daily field manuals:

- Repository structure
- Directory placement conventions
- Commit message standards
- Git workflow standards
- Screenshot naming conventions
- Evidence storage conventions
- Notes.md standards
- Journal.md standards

- Archival procedures

Daily manuals shall assume familiarity with these standards.

4. Daily Manual Scope Rule

- Today's learning objectives
- Today's implementation work
- Today's validation criteria
- Today's deliverables

Stable operational standards shall remain in governance and reference documents.

5. New Technology Exception Rule

Environment setup instructions shall be omitted from routine field manuals.

Setup instructions may be included only when introducing a new:

- Tool
- Framework
- Platform
- Environment
- Workflow

Examples

- Docker
- FastAPI
- OpenAI SDK
- GitHub Actions
- PostgreSQL
- Python Virtual Environments

Approval Record

Approval Authority: Week 4 Process Design Review

Review Status: Approved

Document Status: Locked

Effective Beginning: Day 16 and Beyond

Publication Status: Approved for Archival
