

Software Engineering Reboot 2026

Official Bootcamp Charter

Personal Mission Statement

This Software Engineering Reboot Program is a structured 26-week initiative designed to restore and modernize my software engineering capabilities after an extended period focused primarily on engineering management and leadership roles. Over a professional career spanning more than 22 years in the technology industry, only the first 8 years were spent actively engaged in software development. The remaining years were devoted largely to technical leadership, software engineering management, project delivery, organizational leadership, quality assurance management, and cross-functional team oversight. This reboot is intended to re-establish hands-on technical proficiency while leveraging the depth of experience accumulated throughout a 22-year career.

Program Vision

By the completion of this program, I will possess the practical skills, tools, workflows, and portfolio necessary to operate effectively as a modern software engineer in an AI-accelerated development environment.

Strategic Objectives

1. Return to Hands-On Software Development. Rebuild proficiency in Python, Git, GitHub, Linux, APIs, databases, software architecture, testing methodologies, and modern development workflows. 2. Become Competitive in the AI-Native Software Market. Develop practical skills in AI-assisted coding workflows, prompt engineering, LLM application development, Retrieval-Augmented Generation (RAG), local AI deployment, AI agents, and AI-enabled automation. 3. Build Technical Foundations Supporting the EB2-NIW Endeavor. Establish technical capabilities that support the SME Digital Resilience and Economic Competitiveness Platform, including digital readiness assessment, business resilience analytics, cybersecurity awareness, operational risk assessment, AI-assisted decision support, and workflow automation.

Program Principles

Consistency Over Intensity. Build More Than Read. AI as a Collaborator. Public Portfolio Development. Progress is measured through working software, GitHub repositories, deployable applications, and demonstrable technical artifacts.

Study Commitment

Schedule: Monday through Friday, 7:00 PM to 8:00 PM. Minimum Commitment: - 5 study hours per week - 20 study hours per month - Approximately 130 structured study hours across the program

Weekly Deliverables

Deliverable 1: Wall Planner A one-page execution guide containing weekly objectives, daily activities, targets, and accountability checkpoints. Deliverable 2: Study Workbook A detailed

technical reference containing concepts, commands, exercises, projects, and reference materials.

Portfolio Outcomes

Target artifacts include: Foundations: - Calculator - File Organizer - Password Generator - Log Parser Software Development: - REST API - Database-backed application - Web application DevOps: - Dockerized applications - CI/CD examples Artificial Intelligence: - Local LLM experiments - RAG implementation - AI-enabled application Capstone: A production-quality project demonstrating software engineering capability, AI integration, and practical applicability to the SME Digital Resilience initiative.

Success Definition

The reboot shall be considered successful when: - The 26-week curriculum is completed - A meaningful technical portfolio exists - Modern software engineering proficiency has been re-established - AI-assisted development workflows are understood and practiced - Foundational technical components supporting the EB2-NIW endeavor have been identified, prototyped, or implemented - Confidence has been restored in returning to hands-on software engineering work

Personal Commitment

I commit to approaching this program with discipline, consistency, and a builder's mindset. I recognize that my prior 22 years of industry experience provide a valuable foundation, but that maintaining relevance in a rapidly evolving technology landscape requires continuous learning and adaptation. This reboot represents an investment in my future technical capabilities, professional competitiveness, and the successful realization of technology initiatives that may contribute to economic resilience and competitiveness among small and medium-sized enterprises. Program Start Date: June 1, 2026 Planned Completion Date: November 27, 2026
