

Engineering Reboot 2026

Official Deliverables Framework

This document defines the standard structure that will be used throughout the 26-week Software Engineering Reboot Program.

Weekly Deliverable #1: Wall Planner (Execution Sheet)

Purpose: Execution and accountability.

Format: One-page landscape A4 sheet printed and displayed near the workstation.

Contents: Week Number and Theme Weekly Objective Daily Activities (Mon–Fri) Weekly Deliverables Weekly Targets Essential Commands Accountability Checklist End-of-Week Success Definition Length: Exactly 1 page.

Weekly Deliverable #2: Study Workbook (Reference Manual)

Purpose: Learning and reference material.

Format: Detailed PDF used during study sessions.

Contents: Concepts and Explanations Installation Guides Commands Explained Architecture Diagrams Exercises Mini Projects Troubleshooting Guides Additional Reading End-of-Week Assessment Typical Length: Introductory Weeks: 10–15 pages Coding Weeks: 15–20 pages Web Development Weeks: 20–25 pages DevOps Weeks: 20–30 pages AI/LLM Weeks: 25–35 pages

Weekly Package Structure

Every week will generate: Week-XX-Wall-Planner.pdf Week-XX-Study-Workbook.pdf

Monthly Deliverables

At the end of each month: Monthly Progress Report Portfolio Milestone Review Portfolio Roadmap: Month 1 – Python Utilities Repository Month 2 – Web Application Month 3 – API Project Month 4 – Dockerized Services Month 5 – Cloud Deployment Month 6 – AI-Enabled Capstone Project

GitHub Portfolio Expectations

Expected repositories and artifacts: Calculator File Organizer Password Generator Log Parser Personal Portfolio Website REST API Docker Projects CI/CD Examples Local LLM Experiments RAG Project AI Assistant Capstone Project

Accountability Framework

Weekly Verification: Attendance Deliverables Completed GitHub Updated Workbook Exercises Completed Weekly Assessment Passed Weekly Score Categories: Attendance (/10) Execution (/10) Understanding (/10) Projects (/10) Total (/40)

Expected Outcome After 26 Weeks

The reboot is designed to restore modern software engineering capability with emphasis on: Python Development Git/GitHub Workflows Linux Fundamentals Docker and Containers REST APIs Modern Web Applications Cloud Deployment Fundamentals AI-Assisted Development Portfolio Building Software Engineering Interview Readiness Official Program Standard: One Wall Planner per Week One Study Workbook per Week
