

WEEK 01 FIELD MANUAL v2.0

Software Engineering Reboot 2026

Development Environment & Foundations

HOW TO USE THIS MANUAL

- Open this manual at exactly 7:00 PM.
- Follow instructions in sequence.
- Do not skip verification steps.
- Capture evidence screenshots.
- Complete the journal before ending the session.
- Treat this as an operating procedure, not reading material.

ENGINEERING CONTEXT: THEN VS NOW

THEN (2000s)	NOW (2026)
CVS / SVN	Git / GitHub
Physical Servers	Cloud Platforms
Manual Deployment	CI/CD Pipelines
Standalone Apps	Containers
Search Engines	AI Copilots
Waterfall	Agile / DevOps

Your objective this week is not to become an expert. It is to reconnect your prior software engineering experience with today's development ecosystem.

DAY 1 OPERATIONS

Objective

- Build your engineering workstation.

Deliverables

- Python installed
- Git installed
- VS Code installed

7:00 PM – Create Project Structure

```
mkdir C:\Projects  
mkdir C:\Projects\Engineering-Reboot-2026
```

Verification

```
dir C:\Projects
```

7:10 PM – Install Python

```
python --version
```

Expected Output

```
Python 3.x.x
```

7:20 PM – Install Git

```
git --version
```

7:30 PM – Configure Git

```
git config --global user.name "Glenn Ogapong"  
git config --global user.email "glennj.ogapong@gmail.com"  
git config --list
```

7:40 PM – Install VS Code Extensions

- Python
- GitLens
- Docker
- Error Lens
- Markdown All in One

Evidence Checklist

- ■ Python version screenshot
- ■ Git version screenshot

- ■ VS Code screenshot

DAY 2 OPERATIONS

Objective

- Create your first Git repository.

Commands

```
cd C:\Projects\Engineering-Reboot-2026
mkdir engineering-reboot-2026
cd engineering-reboot-2026
git init
```

Create README.md

```
# Engineering Reboot 2026
```

Commit

```
git add .
git commit -m "Initial commit"
git log
```

AI Exercise

- Ask ChatGPT to explain Git to a former engineering manager.
- Record what concepts are new.

DAY 3 OPERATIONS

Objective

- Install Linux subsystem and learn navigation.

```
wsl --install
```

Verify

```
wsl --status
```

Linux Lab

```
pwd
ls
mkdir projects
cd projects
touch notes.txt
ls
```

Evidence Checklist

- ■ WSL status screenshot
- ■ Linux terminal screenshot

DAY 4 OPERATIONS

Objective

- Reconnect with Python programming.

Hello World

```
print("Hello Glenn")
```

Variables

```
name = "Glenn"  
age = 53  
print(name)  
print(age)
```

Mini Project 1

- Age Calculator

```
birth_year = int(input("Birth year: "))  
age = 2026 - birth_year  
print(age)
```

Mini Project 2

- Temperature Converter

```
fahrenheit = float(input("Fahrenheit: "))  
celsius = (fahrenheit - 32) * 5 / 9  
print(celsius)
```

DAY 5 OPERATIONS

Objective

- Publish your first project.

Build Calculator

```
def add(a,b):  
    return a+b  
  
def subtract(a,b):  
    return a-b  
  
def multiply(a,b):  
    return a*b  
  
def divide(a,b):  
    return a/b
```

Publish

```
git add .  
git commit -m "Completed calculator project"  
git push
```

Evidence Checklist

- ■ Calculator screenshot
- ■ GitHub repository screenshot

DAILY JOURNAL TEMPLATE

What did I learn today?

What confused me?

What should I do tomorrow?

What did I learn today?

What confused me?

What should I do tomorrow?

What did I learn today?

What confused me?

What should I do tomorrow?

END OF WEEK REVIEW

- Can I create a Git repository?
- Can I run Python programs?
- Can I navigate Linux directories?
- Can I explain GitHub?
- Can I explain why Python is important for AI?

- Attendance Score: ____ /10
- Execution Score: ____ /10
- Learning Score: ____ /10
- Confidence Score: ____ /10
